ADAPTER KIT INSTALLATION (Refer to Wiring Diagram and Harness Schematics for Kit Purchased)

CAUTION

- **THINK SAFETY, ALWAYS WEAR SAFETY GLASSES WHEN PERFORMING THE OPERATIONS PRESCRIBED IN THESE INSTRUCTIONS**
- **READ ALL INSTRUCTIONS CAREFULLY BEFORE ATTEMPTING INSTALLATION**

IMPORTANT: *With vehicle and all lights and accessories off, apply a dielectric compound on all electrical connections to prevent corrosion.*

1. Disconnect the vehicle headlight electrical connectors from the back of the vehicle headlamps.

NOTE: *In order to disconnect some vehicle headlight connectors, it may be necessary to remove the headlamp assembly from the front of the vehicle, if the connector is not easily accessible.*

2. Plug together the light green connectors on the main harness with the corresponding adapters needed for the vehicle. The driver's side connection has a yellow wire and the passenger side has a gray wire.

IMPORTANT: *The correct adapters must be connected to each side for proper function.*

3. Plug the headlight adapters into the vehicle on both sides. Plug the corresponding connectors into the back of the vehicle headlights, then the connectors from the vehicle headlights into the corresponding connectors on the headlight adapter.
4. On the driver's side (Left Turn):
Locate the left turn signal wire on the vehicle harness. At a suitable distance away from the turn signal connector, cut this wire. Using butt connectors, splice orange headlight adapter wire to this vehicle turn signal wire going to the turn signal lamp, and splice the yellow headlight adapter wire to this vehicle turn signal wire coming from the vehicle harness.
5. On the passenger side (Right Turn):
Locate the right turn signal wire on the vehicle harness. At a suitable distance away from the turn signal connector, cut this wire. Using butt connectors, splice violet headlight adapter wire to this vehicle turn signal wire going to the turn signal lamp, and splice the gray headlight adapter wire to this vehicle turn signal wire coming from the vehicle harness.
6. Place the other end of the main harness on the outside of the grille.
7. Attach the main harness connectors to the right and left plow light headlamps. Turn on the vehicle lights and check operation. Check to make sure the vehicle headlights go out and plow headlights come on. Check park and turn signals.
8. If disassembled, reassemble vehicle components.
9. Secure the main harness to a safe location with electricians tape or plastic wire ties. Excess harness length should be neatly coiled and taped, or tied up out of the way.

CAUTION

**Make sure that wire harness is routed away from all moving engine components.
Example; fan, belts etc.
DO NOT attach wire harness to hoses, radiator AC coils, exhaust manifolds, or control cables.**
